Report Overview

1,2-Dihydroxyethane, commonly known as ethylene glycol, is a colorless, odorless, and sweet-tasting organic compound primarily used as an industrial raw material and antifreeze agent. Its chemical properties, including high boiling point and water solubility, make it ideal for automotive coolant formulations, heat transfer fluids, and hydraulic brake fluids. Additionally, it serves as a precursor in polyester fiber and resin production, contributing to the textile and packaging industries. The market demand is driven by the automotive sector, where it is essential for engine cooling systems, and the expanding polyester industry, particularly in emerging economies with growing textile and plastic manufacturing. However, environmental concerns over its toxicity and stricter regulations on antifreeze disposal may impact future growth. The Asia-Pacific region dominates consumption due to rapid industrialization, while North America and Europe focus on sustainable alternatives and recycling initiatives. Overall, the market is projected to grow moderately, influenced by automotive production trends and advancements in bio-based substitutes.

The global 1,2 Dihydroxyethane market size was estimated at USD 300.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
