Report Overview

1,2-Propandiol (also known as propylene glycol) is a versatile organic compound widely used across multiple industries due to its hygroscopic, solvent, and stabilizing properties. It exists in two grades?industrial and pharmaceutical?with applications ranging from antifreeze and de-icing fluids to food additives, cosmetics, pharmaceuticals, and e-liquids. The market is driven by increasing demand in food processing (as a humectant and preservative), personal care products (as a moisturizer), and pharmaceuticals (as a drug solvent), alongside growth in unsaturated polyester resins for construction and automotive sectors. However, regulatory scrutiny on synthetic additives, particularly in food and cosmetics, and the rising preference for bio-based alternatives (e.g., 1,3-propanediol derived from renewable sources) pose challenges. Geographically, Asia-Pacific dominates production and consumption due to expanding industrial activities and urbanization, while North America and Europe focus on high-purity applications in pharmaceuticals and sustainable alternatives. Key players include Dow Chemical, BASF, and ADM, with innovation centered on green production methods and niche applications like battery coolants for electric vehicles. The market is projected to grow steadily, supported by industrialization and sectoral demand, though price volatility in raw materials (propylene oxide) and environmental concerns may influence long-term dynamics.

The global 1,2-Propandiol market size was estimated at USD 6483.51 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.80% during the forecast period.
