Abstracts

A 120dB HDR CMOS Image Sensor is a type of CMOS image sensor that has a high dynamic range of 120 decibels (dB), which is a common high dynamic range level in many application scenarios. For example, in the field of automotive electronics, the dynamic range of HDR CMOS Image Sensors used in most on-board cameras generally needs to reach 120dB, which can adapt to the complex lighting conditions when the car is driving in different lighting environments, such as roads under strong light, objects in the shadows, and low-light environments at night, etc., and provide clear and accurate image information for the car's safe driving assistance system.HDR refers to the ratio between the brightest and darkest parts of an image that a sensor can capture. In the case of a 120dB HDR CMOS Image Sensor, it means the sensor can handle a very wide range of light intensities, allowing for more details to be captured in both the bright highlights and the dark shadows of a scene compared to sensors with lower dynamic ranges.

The global 120DB HDR CMOS Image Sensor market size was estimated at USD 12570.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
