Abstracts

1,2,3-Trichlorobenzene (TCB) is an aromatic organic compound consisting of a benzene ring substituted with three chlorine atoms at the 1, 2, and 3 positions; it is one of the isomers of trichlorobenzene, characterized by its high boiling point, low water solubility, and chemical stability, making it useful as an intermediate in the synthesis of dyes, pesticides, and other specialty chemicals, as well as a solvent in industrial applications where its non-polar properties and thermal resistance are advantageous. The market for 1,2,3-trichlorobenzene is primarily driven by demand from the agrochemical and chemical manufacturing sectors, where it serves as a key raw material for producing herbicides, insecticides, and other chlorinated derivatives; however, growth is tempered by regulatory pressures and environmental concerns due to its persistence, bioaccumulation potential, and toxicity, leading to stricter controls and a gradual shift toward safer alternatives in many regions. Geographically, Asia-Pacific dominates both production and consumption, with China and India being significant contributors due to their expanding chemical industries and lower regulatory stringency, while North America and Europe exhibit slower growth or decline as a result of environmental policies and substitution with less hazardous chemicals; overall, the market remains niche but stable, with innovation focused on improving production efficiency and exploring greener synthesis routes to align with sustainability trends.

The global 1,2,3 Trichlorobenzene market size was estimated at USD 165.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
