### Report Overview

1,2,4-Butanetriol is a trihydric alcohol primarily used as a chemical intermediate in the production of specialty polymers, pharmaceuticals, and agrochemicals. It serves as a key raw material for synthesizing polyesters, plasticizers, and cross-linking agents due to its trifunctional hydroxyl groups, which enhance reactivity and flexibility in polymer formulations. The compound also finds niche applications in the production of explosives, particularly as a precursor for butanetriol trinitrate (BTTN), a high-energy propellant additive. Additionally, its hygroscopic properties make it suitable for use in humectants and moisturizing agents in personal care products. The market for 1,2,4-butanetriol is influenced by demand from defense, polymer, and pharmaceutical industries, with growth driven by advancements in specialty chemicals and increasing R&D investments in high-performance materials. However, regulatory constraints on explosive precursors and competition from alternative polyols may pose challenges to market expansion. Geographically, North America and Europe dominate production and consumption due to established chemical manufacturing infrastructure, while Asia-Pacific is emerging as a high-growth region, fueled by expanding industrial applications and defense sector investments.
