Report Overview

The 12V nickel-metal hydride battery is a rechargeable battery that uses nickel-metal hydride compound as the positive electrode material. This type of battery generally has higher energy density and longer cycle life, making it suitable for a variety of portable electronic devices and power tools. 12V refers to the battery's rated voltage, while 'Nickel Metal Hydride' (NiMH) refers to the battery's chemical type. These batteries typically charge quickly and have no memory effect, meaning that charging without fully discharging does not reduce their maximum energy capacity.
