Report Overview

1,3-Butylene Glycol (1,3-BG, CAS 107-88-0) is a colorless, odorless, and viscous organic compound primarily used as a humectant, solvent, and viscosity-reducing agent in cosmetics, pharmaceuticals, and industrial applications. Its hygroscopic properties make it valuable in skincare and haircare formulations, where it helps retain moisture and improve product texture. In the pharmaceutical sector, it serves as a solvent for active ingredients and a stabilizer in injectables. Industrially, it is employed in polyester resins, plasticizers, and as an intermediate in chemical synthesis. The market for 1,3-Butylene Glycol is driven by rising demand for personal care products, particularly in Asia-Pacific, where consumers prioritize hydration-based skincare. Regulatory approvals for its use in cosmetics (e.g., by the FDA and EU Cosmetics Regulation) further support its adoption. However, competition from alternative glycols like propylene glycol and growing scrutiny over ingredient safety in cosmetics could pose challenges. Key producers focus on bio-based production methods to align with sustainability trends, while innovations in high-purity grades cater to pharmaceutical demands. The market is projected to grow steadily, with expansion in emerging economies and niche applications in clean-label formulations acting as growth levers.

The global 1,3-butylene Glycol (CAS 107-88-0) market size was estimated at USD 178.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
