Abstracts

1,4 Diaminocyclohexane is a cycloaliphatic diamine compound characterized by its six-membered ring structure with two amino groups positioned para to each other. This configuration imparts unique chemical properties, including rigidity, thermal stability, and resistance to UV degradation, making it particularly valuable as a curing agent and crosslinker in the production of high-performance epoxy resins, polyamides, and polyurethanes. Its saturated ring structure contributes to low viscosity and excellent mechanical strength in polymer matrices, distinguishing it from aromatic diamines which are more prone to yellowing and degradation under environmental stress. The compound is also utilized in specialty applications such as corrosion inhibitors, adhesives, and coatings where durability and chemical resistance are critical.

The global 1,4 Diaminocyclohexane market size was estimated at USD 35.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
