Abstracts

1,5 Naphthylenediamine (C1=CC=C2C(=C1)C(=CC=C2)N) is an aromatic diamine compound primarily used as a key intermediate in the synthesis of dyes, pigments, and specialty chemicals, particularly in the production of optical brighteners, azo dyes, and polymer stabilizers due to its bifunctional amino groups that enable coupling and polymerization reactions. Its chemical structure, featuring amino groups at the 1 and 5 positions of the naphthalene ring, provides thermal stability and reactivity suited for high-performance applications in textiles, plastics, and coatings industries, where it contributes to color fastness, UV resistance, and material durability. The compound is typically manufactured through the nitration and reduction of naphthalene or via more specialized synthetic routes to achieve high purity grades required for industrial and pharmaceutical applications, with handling considerations due to its potential toxicity and sensitivity to oxidation.

The global 1,5 Naphthylenediamine market size was estimated at USD 35.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
