Report Overview

1,6-Hexanediol (HDO) is a white crystalline diol primarily used as a chemical intermediate in the production of polyurethanes, coatings, adhesives, and specialty polymers. Its bifunctional structure?featuring hydroxyl groups at both ends?makes it a key building block for synthesizing high-performance materials, including polyester polyols, plasticizers, and UV-curable resins. The compound is valued for its excellent solubility, thermal stability, and ability to enhance flexibility and durability in end products. Demand for 1,6-Hexanediol is driven by growth in industries such as automotive, construction, and electronics, where its derivatives contribute to lightweight materials, durable coatings, and advanced adhesives. The market is also influenced by trends toward bio-based alternatives, as manufacturers seek sustainable feedstocks to reduce environmental impact. Asia-Pacific dominates production and consumption due to robust industrial activity, while North America and Europe focus on high-value applications in specialty chemicals. Pricing is subject to fluctuations in raw material costs, particularly adipic acid and caprolactam, which are derived from petroleum. Regulatory pressures and shifting consumer preferences toward eco-friendly solutions are shaping innovation, with research efforts targeting bio-based 1,6-Hexanediol production methods to align with circular economy goals.

The global 1,6-Hexanediol market size was estimated at USD 397.95 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
