Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 1D and 2D Barcodes Verification System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 1D and 2D barcodes verification system is a comprehensive inspection platform for standardized quality assessment of linear barcodes (e.g., EAN-13, Code 128) and 2D matrix codes (e.g., QR codes, Data Matrix). Equipped with high-resolution cameras or laser scanners, the system captures code images and evaluates their symbol grades (A-F) against ISO, GS1, and other international standards, measuring parameters such as minimum reflectance, modulation ratio, defects, and decode threshold. Unlike standard scanners, the system not only confirms readability but also quantifies quality grades to ensure reliability throughout the supply chain—from production to end-user scanning. Typically integrated into production lines or lab environments, it supports automated triggered inspection and data analysis, making it ideal for industries with stringent traceability requirements, such as pharmaceuticals, automotive components, and electronics. Advanced systems may interface with MES (Manufacturing Execution Systems) or ERP (Enterprise Resource Planning) for centralized quality data management.

The global 1D and 2D Barcodes Verification System market size was estimated at USD 2171.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
