Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 1G6P Lens competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of 1G6P lenses will reach 91.83 million units, with an average selling price of US\$7 per unit. Optical lenses can be divided into three categories according to design technology: plastic lenses, glass lenses and glass-plastic hybrid lenses. Plastic lenses have the lowest industrial difficulty and cost, and have good mass production capabilities, but their thermal expansion coefficient is too low and their adaptability to the environment is poor. They are often used in daily life occasions such as mobile phone cameras and digital cameras. Glass lenses have complex processes, good light transmittance and stability, and are often used in professional equipment such as SLR cameras and high-end scanners. The current market is monopolized by several international giants. Glass-plastic hybrid lenses have reduced costs while ensuring product performance and stability. Various indicators are between plastic lenses and glass lenses, and are suitable for use in many fields such as vehicles, digital cameras, and security monitoring. The 1G6P glass-plastic hybrid lens achieves greater light intake and better background dispersion effects through the combination of 1 layer of glass lenses and 6 layers of plastic lenses, thereby improving the photo effect. According to Lianchuang Electronics data, the thickness of the 1G6P glass-plastic hybrid lens is 0.3mm thinner than the mainstream 7P lens. Lenses continue to upgrade, and there is limited room for improvement in plastic lenses. Glass-plastic hybrid lenses are expected to become a new trend. Glass-plastic hybrid lenses have been widely used in surveillance security, digital cameras, SLR cameras, etc., and are expected to be used in the main camera of high-end flagship models.

The global 1G6P Lens market size was estimated at USD 643.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
