Report Overview

2-(Bromomethyl)naphthalene is a brominated derivative of naphthalene, primarily used as an intermediate in organic synthesis, particularly in the pharmaceutical and agrochemical industries. Its chemical structure, featuring a bromomethyl group attached to the naphthalene ring, makes it valuable for further functionalization, including cross-coupling reactions, nucleophilic substitutions, and as a precursor for more complex molecules. The compound is often employed in the production of active pharmaceutical ingredients (APIs), specialty chemicals, and liquid crystal materials, where precise bromination is required for downstream applications. The market for 2-(Bromomethyl)naphthalene is driven by demand from pharmaceutical R&D and agrochemical formulations, though its niche application keeps volumes relatively low compared to bulk chemicals. Regulatory scrutiny on brominated compounds and the shift toward greener alternatives may influence future market dynamics.

The global 2-(Bromomethyl)naphthalene market size was estimated at USD 2.29 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.99% during the forecast period.
