## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-Butanethiol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 2-Butanethiol production reached approximately 51 kilotons with an average global market price of around US\$ 2400 per ton. 2-Butanethiol is an organosulfur compound with the chemical formula  $C_4H_9S$ , belonging to the class of aliphatic thiols. It is a colorless to yellow liquid with an extremely strong, unpleasant odor often described as skunk-like or resembling rotten cabbage. This compound occurs naturally in some foods, fermentation processes, and is also found in the scent glands of skunks. Industrially, it is used in very small concentrations as a warning odorant in fuel gases like propane, helping to detect leaks due to its intense smell. Like other low-molecular-weight thiols, it is highly volatile and toxic in high concentrations, requiring careful handling.

The global 2-Butanethiol market size was estimated at USD 123.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
