Abstracts

2-Chloropropionyl chloride is an organochlorine compound with the molecular formula $C_3H_4Cl_2O$, primarily used as a key intermediate in the synthesis of various chemicals, including pharmaceuticals, agrochemicals, and specialty polymers. It functions as an acylating agent, enabling the introduction of the 2-chloropropionyl group into target molecules, which is particularly valuable in the production of herbicides like clodinafop-propargyl and active pharmaceutical ingredients (APIs) such as antidepressants and anti-inflammatory drugs. Its reactivity and specificity make it indispensable in fine chemical synthesis, though it requires careful handling due to its corrosive nature and tendency to hydrolyze. The compound is typically manufactured through chlorination of propionic acid derivatives and is supplied in high purity grades to meet the stringent requirements of end-use industries.

The global 2 Chloropropionyl Chloride market size was estimated at USD 120.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
