Abstracts

A two-dimensional rotary table is a device capable of rotating in two dimensions (typically within mutually perpendicular planes). It mainly consists of a base, rotating shafts (two mutually perpendicular axes), a load-bearing platform, and a driving mechanism. The load-bearing platform is used to place objects that are being tested, observed, or operated on. The driving mechanism, powered by transmission methods such as motors and gears, drives the rotating shafts to rotate the load-bearing platform in two directions (e.g., horizontally and vertically), thereby achieving angular adjustment of the object to meet various application requirements.

The global 2-dimensional Rotary Tables market size was estimated at USD 517.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
