Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-Imidazolidinone competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of 2-imidazolidinone reached 33,510 tons, with an average selling price of US\$6,651 per ton. 2-Imidazolidinone (MI), also known as ethylene urea or cycloethylene urea, CAS number 120-93-4, is a five-membered cyclic urea compound with the molecular formula $C_3H_5N_2O$ and a molecular weight of 86.09. It is a white to off-white crystalline powder at room temperature, with a melting point of 131-133 °C; it is readily soluble in water and hot ethanol, slightly soluble in ether, and practically insoluble in benzene and chloroform. Currently, the mainstream process uses ethylenediamine and urea as raw materials to produce 2-imidazolidinone through a one-step condensation-ring-closure reaction. The reaction conditions are mild, and the yield is high. Ethylenediamine accounts for approximately 55% of the variable cost, and urea for approximately 15%. Both are bulk chemicals, and their prices fluctuate with oil prices and agricultural seasons. In 2024, the average domestic price of ethylenediamine was approximately RMB 13,000/ton, and urea was RMB 2,500/ton. Besides raw materials, energy consumption (high-temperature amine stripping and vacuum drying), environmental treatment (tail gas absorption, wastewater denitrification), and labor depreciation account for approximately 30% of the total cost. With increasingly stringent environmental regulations, the cyanide route has been phased out, and green continuous processes have become the direction for cost reduction. It is estimated that large-scale production can control the total cash cost to within RMB 20,000/ton.

The global 2-Imidazolidinone market size was estimated at USD 223.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the

forecast period.
