## Abstracts

Pneumatic Grippers provide their motion and actuation by introducing compressed air into a chamber of the device and powering a piston or a rolling diaphragm attached to a rod. The resultant motion of that rod is then converted mechanically to some form of gripping motion. Grippers are typically available in either an angular or parallel jaw version. The term parallel implies that the gripping surfaces of the jaws remain parallel to one another throughout the gripper's travel.

The global Pneumatic Gripper market size was estimated at USD 759.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.
