## Abstracts

2-Mercaptoethanol (2-ME), also known as  $\beta$ -mercaptoethanol, is an organosulfur compound with the chemical formula  $C_2H_5OS$ . It contains both hydroxyl (-OH) and thiol (-SH) functional groups, making it highly reactive and widely used as a reducing agent. 2-ME is commonly applied in biochemical research, particularly in protein denaturation and cell culture applications. Additionally, it serves as an intermediate in the production of pharmaceuticals, agrochemicals, and polymer additives. Its strong ability to break disulfide bonds and prevent oxidation makes it an essential compound in various industrial and laboratory processes.

### Market Dominance and Production Trends

China has established itself as the world's largest producer of 2-ME, accounting for approximately 59% of global production in 2024. The country's rapid market expansion is driven by strong domestic demand and significant advancements in production technology and capacity. The market revenue in China is growing at a faster pace than global averages, with a projected compound annual growth rate (CAGR) of 7.17% by 2031. This dominance is largely attributed to China's technological advancements in 2-ME synthesis, which have improved production efficiency and cost-effectiveness. Among various manufacturing methods, the atmospheric pressure process has become the industry standard due to its lower production costs and higher efficiency. Leading Chinese producers, such as Guangdong Zhonghe Huasu and Yifeng New Materials, have solidified their market positions through the adoption of this process, with Guangdong Zhonghe Huasu emerging as a global industry leader.

### Market Structure and Competitive Landscape

The global 2-ME market is highly concentrated, with key producers from China and Europe controlling the majority of the supply chain. This industry structure indicates that while the market is expanding rapidly, high technological and environmental barriers limit the entry of new players. As a result, existing manufacturers benefit from stronger bargaining power and higher profit margins. Furthermore, increasing regulatory scrutiny on environmental and safety

standards is pushing companies to invest in greener and more sustainable production processes. Looking ahead, market growth will be driven by rising demand from pharmaceuticals, biotechnology, and polymer industries, with established producers continuing to strengthen their competitive edge through technological innovation and capacity expansion.

The global 2-Mercaptoethanol market size was estimated at USD 75.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
