## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-Methyl-2-Propanethiol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 2-Methyl-2-propanethiol production reached approximately 2500 tons with an average global market price of around US\$ 63,000 per ton. 2-Methyl-2-propanethiol is a volatile organosulfur compound with the molecular formula  $C_4H_{10}S$ . It consists of a tert-butyl group (a branched alkyl group with three methyl substituents attached to a central carbon) bonded to a thiol group (-SH). This colorless liquid has a strong, unpleasant odor, often described as skunk-like or reminiscent of rotten cabbage, and is primarily used as an odorant in natural gas to provide a detectable warning of leaks, since natural gas itself is odorless. Its high volatility and intense smell make it highly effective for this purpose, even at very low concentrations. The market growth of 2-Methyl-2-Propanethiol is primarily driven by its critical role as a natural gas odorant, where rising global demand for residential, commercial, and industrial gas usage directly increases consumption. Growth is further supported by expanding urbanization, stricter safety regulations mandating effective gas leak detection, and infrastructure development in emerging economies. Additionally, its applications in specialty chemicals and as an intermediate in certain organic syntheses add to market demand, though these are smaller compared to the gas sector. Overall, the combination of energy sector expansion and safety compliance requirements positions TBM as a steadily growing niche chemical.

The global 2-Methyl-2-Propanethiol market size was estimated at USD 158.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
