Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-methylprop-1-ene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 2-methylprop-1-ene, commonly known as isobutylene, is a branched-chain alkene with the molecular formula C_4H_8 . It is one of the isomers of butene and features a double bond between the first and second carbon atoms, with a methyl group attached to the second carbon. This compound is a colorless, flammable gas at room temperature and has a slightly sweet odor. It is primarily obtained through catalytic or thermal cracking of hydrocarbons, or through the dehydrogenation of isobutane.
