Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2-Pack Polyurethane Primer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 2-Pack Polyurethane Primer production reached approximately 16,700 tons, with an average global market price of around US\$ 25 per kg. 2-Pack Polyurethane Primer is a high-performance, two-component coating system composed of a polyol resin (base component) and an isocyanate hardener (curing agent) that chemically react to form a tough, durable film. Unlike single-pack primers, this two-part system requires mixing prior to application, which ensures superior adhesion, chemical resistance, abrasion resistance, and long-term durability. The primer is typically applied as an undercoat in multi-layer coating systems, providing a stable substrate for polyurethane topcoats or other high-performance finishes. Its formulation enables excellent sealing of porous surfaces, resistance to moisture ingress, and protection against corrosion, making it highly suitable for harsh environmental conditions.

The global 2-Pack Polyurethane Primer market size was estimated at USD 417.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
