### Report Overview

2-Phenylethanol (PEA) is a colorless, slightly viscous aromatic alcohol with a floral, rose-like fragrance, widely used in perfumery, cosmetics, and flavoring industries. It occurs naturally in essential oils such as rose, jasmine, and geranium but is predominantly synthesized commercially due to cost efficiency and scalability. Its applications extend to pharmaceuticals as a preservative and solvent, as well as in food and beverage industries for flavor enhancement. The market demand is driven by the growing preference for natural and synthetic fragrance ingredients in personal care products, alongside increasing disposable incomes in emerging economies. Regulatory approvals, such as those from the FDA and EFSA, further support its use in food and fragrance formulations. However, volatility in raw material prices (e.g., benzene derivatives) and stringent environmental regulations on chemical production pose challenges. Key producers focus on bio-based synthesis methods to align with sustainability trends, while Asia-Pacific dominates consumption due to booming cosmetics and food industries in China and India.

The global 2 Phenyl Ethanol market size was estimated at USD 761.34 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
