Abstracts

Metal aerosol cans are pressurized containers consisting of two primary components? a cylindrical body and a dome-shaped top equipped with a valve and actuator? designed to dispense a wide range of products, including personal care items, household cleaners, automotive products, paints, and industrial coatings, in spray or foam form. These cans are typically constructed from tinplate or aluminum, offering durability, barrier properties to protect contents from light and air, and compatibility with propellants such as hydrocarbons or compressed gases. The two-piece design, often manufactured through drawn-and-walled or drawn-and-ironed processes, provides structural integrity to withstand internal pressure while enabling efficient high-volume production, customization through lithography or labeling, and compliance with regulatory standards for safety and sustainability, such as recyclability and reduced material usage.

The global 2 Piece Metal Aerosol Cans market size was estimated at USD 2350.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
