Abstracts

20% glass filled nylon is a composite material consisting of nylon polymer, most commonly nylon 6 or nylon 66, reinforced with 20% by weight of short glass fibers, engineered to enhance mechanical, thermal, and dimensional properties compared to unfilled nylon. The incorporation of glass fibers significantly increases tensile and flexural strength, stiffness, and heat deflection temperature while reducing moisture absorption and improving dimensional stability, making it particularly suitable for applications requiring higher structural integrity and resistance to deformation under load or elevated temperatures. This material is widely utilized across industries such as automotive, electrical and electronics, industrial machinery, and consumer goods for components like gears, housings, connectors, and structural parts where a balance of lightweight characteristics, durability, and cost-effectiveness is essential.

The global 20% Glass Filled Nylon market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
