The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 200G DAC Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 200G DAC passive copper cable is a high-speed connectivity solution for data centers, high-performance computing, and enterprise networks. Using twisted-pair copper cables and QSFP56 connectors, it supports data rates of 200Gbps and is suitable for short-distance connections within a rack or between adjacent racks. It features low latency, low power consumption, and high cost-effectiveness. Global sales of 200G DAC passive copper cables are expected to reach approximately 12,000 kilometers in 2024, with an average unit price of approximately US\$30 per meter. Typical annual production capacity for a single cable is approximately 100,000 kilometers. Upstream companies primarily engage in precision copper wire manufacturing, connector production, and cable assembly. Midstream players include cable manufacturing and assembly, while downstream players include data center operators, cloud service providers, and network equipment manufacturers. The industry's gross profit margin is approximately 20%. Within the product cost structure, raw material costs account for approximately 50%, manufacturing and assembly costs account for approximately 30%, R&D and quality control costs account for approximately 10%, and selling and administrative expenses account for approximately 10%. According to parameter classification, 200G DAC passive copper cables can be divided into QSFP56 to QSFP56, QSFP56 to SFP56, QSFP56 to QSFP-DD, etc. according to connector type; 28 AWG, 30 AWG, 32 AWG, etc. according to wire gauge; 0.5m, 1m, 2m, 3m, etc. according to length; standard type, low latency type, low power consumption type, etc. according to application scenarios.
