Abstracts

2,2-Dimethylolpropionic Acid (DMPA) is a white crystalline, hydrophilic compound with two primary hydroxyl groups and one tertiary carboxylic acid group, characterized by its unique molecular structure that enables it to act as both a chain extender and an internal emulsifier in polymer synthesis. It is widely utilized in the production of water-dispersible polyurethanes, polyester resins, and alkyd coatings, where it imparts improved stability, adhesion, chemical resistance, and mechanical properties without requiring external surfactants. Its bifunctional nature allows for covalent incorporation into polymer backbones, enhancing hydrophilicity and facilitating the formation of stable aqueous dispersions, which is particularly valuable in environmentally compliant, low-VOC (volatile organic compound) formulations across coatings, adhesives, sealants, and elastomers industries.

The global 2,2 Dimethylolpropionic Acid market size was estimated at USD 86.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
