Abstracts

23-Valent Pneumococcal Polysaccharide Vaccine is a kind of vaccine used to prevent infection caused by pneumococcal bacteria. 23-Valent Pneumococcal Polysaccharide Vaccine contains 23 of the most common types of pneumococcal bacteria. 23-Valent Pneumococcal Polysaccharide Vaccine is for use only in adults and children who are at least 2 years old. For children younger than 2 years old, another vaccine called Prevnar (pneumococcal conjugate vaccine [PCV] 7-valent) is used, usually given between the ages of 2 months and 15 months.

Market Drivers:The 23-Valent Pneumococcal Polysaccharide Vaccine (PPSV23) market is driven by the increasing prevalence of pneumococcal infections, particularly among high-risk populations such as the elderly, children, and immunocompromised individuals. Governments and health organizations worldwide are promoting vaccination programs to reduce the burden of pneumococcal diseases, which has significantly boosted market growth. Additionally, rising awareness about the importance of preventive healthcare and advancements in vaccine manufacturing technologies contribute to the increased adoption of PPSV23 vaccines.

Market Challenges:However, the market faces challenges such as the high cost of vaccination, which limits accessibility in low- and middle-income countries. Moreover, the competition from newer pneumococcal conjugate vaccines (PCVs), which offer broader coverage and are preferred for pediatric use, poses a threat to PPSV23's market share. Another concern is vaccine hesitancy and misinformation, which can hinder immunization efforts and impact the overall market growth.

Merck is the largest manufacturers of 23-Valent pneumococcal polysaccharide vaccine in the world, has a share about 78%. Other players include Sinovac, Kangtai Bio, CDIBP, Walvax, etc. United States is dominating the global 23-Valent pneumococcal polysaccharide vaccine market, has a share nearly 78% in terms of production. The largest market is United States, holds a share about 48%, followed by China and Europe, with around 25% and

22% market share respectively.

The global 23-Valent Pneumococcal Polysaccharide Vaccine market size was estimated at USD 1211.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
