Abstracts

2,4-Dinitrochlorobenzene is used as an intermediate for the synthesis of sulfur dyes, disperse dyes, reactive dyes and pharmaceuticals. 2,4-Dinitrobenzene chloride is an important fine chemical intermediate, widely used in dyes, medicines, pesticides, explosives, chemical additives and other fields. At present, China's annual production capacity has reached more than 70,000 tons. Its most important downstream consumer product is sulfur black dye, which accounts for more than 80% of the total consumption and plays a pivotal role in the international market. In the early stage, the production of 2,4-dinitrochlorinated benzene basically adopted the process of twice nitration of chlorinated benzene. In the past two years, the process route of producing 2,4-dinitrochlorobenzene by using p-nitrochlorobenzene has become popular all over the country. The main reason for its popularity is mainly due to the raw materials for the production of 2,4-dinitrochlorobenzene. Since the prices of chlorinated benzene and p-nitrochlorobenzene are irregular, the controllability of costs is greatly reduced. Some enterprises experienced a sudden change in the market after the process transformation, and the cost-saving process suddenly increased the cost.

The global 2,4-Dinitrochlorobenzene market size was estimated at USD 376.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global 2,4-Dinitrochlorobenzene market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
