Abstracts

2,7-Dihydroxynaphthalene is a dihydroxy derivative of naphthalene, characterized by hydroxyl groups at the 2 and 7 positions, which imparts specific chemical reactivity and functionality; it serves as a key intermediate in the synthesis of dyes, pigments, fluorescent brighteners, and specialty polymers, where its structural properties enable the formation of chromophores and complex molecular architectures essential in industrial and high-performance applications. The market for this compound is driven by demand in the textile, plastics, and printing industries, with growth influenced by trends in coloration technologies, environmental regulations affecting dye production, and innovations in organic electronic materials. Supply dynamics are shaped by synthetic chemistry advancements, raw material availability (particularly naphthalene and its derivatives), and regional production capacities, with significant manufacturing concentrated in Asia-Pacific due to cost advantages and strong downstream industrial demand. Price volatility may arise from fluctuations in precursor costs, energy inputs, and regulatory pressures, while competition centers on purity, consistency, and the ability to meet stringent industry specifications for end-use applications.

The global 2,7 Dihydroxynaphthalene market size was estimated at USD 35.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
