Report Overview

Two-dimensional ablation catheter is a medical device used for cardiac electrophysiological ablation surgery. It can use X-ray assisted positioning, and the tip of the catheter can be delivered to the abnormal electrophysiological tissue inside the heart, and then through radiofrequency current or freezing, etc. The abnormal tissue is ablated to restore normal heart rhythm. The advantage of the two-dimensional ablation catheter is that it can achieve precise ablation position and range, reduce the occurrence of complications, and improve the success rate and safety of the operation. The disadvantage of two-dimensional ablation catheter is that it requires professional operation techniques and equipment, the operation time is longer, the cost is higher, and it may cause complications such as infection, bleeding, and thrombus.

The global 2D Ablation Catheter market size was estimated at USD 300.83 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.20% during the forecast period.
