Report Overview

2D barcode cryotubes are specialized laboratory tubes designed for the storage of biological samples at ultra-low temperatures, typically ranging from -80?C to -196?C (liquid nitrogen). These tubes feature a unique 2D barcode system, often laser-etched or printed for durability, enabling high-throughput sample tracking and management in biobanking, clinical research, and pharmaceutical applications. The 2D barcode technology ensures accurate identification and minimizes human error by integrating with laboratory information management systems (LIMS) and automated sample handling workflows. The tubes are constructed from high-quality, chemically resistant materials such as polypropylene and are designed to withstand extreme temperatures while maintaining sample integrity. The growing demand for organized, traceable sample storage in genomics, drug development, and personalized medicine has driven the adoption of 2D barcode cryotubes in research institutions, hospitals, and biotech companies. The market is further influenced by regulatory requirements for sample traceability, advancements in cryopreservation techniques, and increasing investments in biobanking infrastructure globally.
