Report Overview

MXene is a class of two-dimensional (2D) materials that were first discovered in 2011. MXene materials are derived from layered transition metal carbides, nitrides, or carbonitrides, known as MAX phases. The term 'MAX' refers to the combination of M (transition metal), A (group 13 or 14 element), and X (carbon and/or nitrogen). 2D layered materials derived from MAX or non-MAX phases were not predicted to exist before this discovery. Unlike most 2D ceramics, MXenes have inherently good conductivity and excellent volumetric capacitance because they are molecular sheets made from the carbides and nitrides of transition metals like titanium. MXenes have already found applications ranging from energy storage to medicine and optoelectronics.

The global 2D Metal Carbides and Nitrides market size was estimated at USD 32.80 million in 2023 and is projected to reach USD 244.38 million by 2032, exhibiting a CAGR of 25.00% during the forecast period.

North America 2D Metal Carbides and Nitrides market size was estimated at USD 12.60 million in 2023, at a CAGR of 21.43% during the forecast period of 2024 through 2032.
