Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 2L FCCL competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 2L-FCCL is a material used to manufacture flexible circuit boards (FPCs), consisting of two layers of copper foil and one layer of flexible insulating substrate (usually polyimide or polyester film). It has good flexibility and electrical performance, and can be used in electronic devices that require high-density connections and flexibility. 2L-FCCL is commonly used for applications that require complex circuits to be implemented in limited spaces, such as smartphones, tablets, wearable devices, etc. Due to its flexible nature, it can adapt to complex three-dimensional spatial layouts and withstand bending and curling. In 2024, global 2L-FCCL production reached approximately 78.99 M Sq m, with an average global market price of around US\$ 10.17 per Sq m. The annual production capacity of a single production line is 4 million square meters, with a gross profit margin of about 20%. Upstream: Base film: PI film (polyimide), PET/PEN film, LCP film. copper foil. Resin/Adhesive Systems Downstream: consumer electronics, automotive electronics, communication equipment. Raw material cost is about 60%-75%; manufacturing cost is about 10%-15%; labor cost is about 5%-10%. With the development of technologies such as smartphones, wearable devices, automotive electronics, 5G communication, and the Internet of Things, the demand for miniaturization, integration, and flexible circuit boards (FPCs) is constantly increasing. Two layer flexible copper-clad laminate (2L-FCCL) is one of the key materials for FPC, and its market demand is increasing year by year, especially in high-end electronic products. The demand for FPC in the global market has become an important factor driving the growth of the FCCL industry. The demand for lightweight, high integration, and miniaturization in modern electronic devices has promoted the development of the FPC and 2L-FCCL markets. 2L-FCCL

has high electrical performance and good mechanical performance, which can adapt to the increasingly miniaturized product design requirements. As electronic products continue to pursue smaller sizes and higher performance, 2L-FCCL has become the preferred material for high-density connections and flexible circuit designs. The application of automation and intelligent manufacturing technology in the production process of 2L-FCCL has become a trend in the industry. This not only improves production efficiency, but also ensures high quality and precision of the products. In addition, with the popularization of smart devices, higher requirements have been put forward for low-cost and high-efficiency production processes, promoting the application of advanced manufacturing technologies.

The global 2L FCCL market size was estimated at USD 803.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
