## Abstracts

A three-axis benchtop dispensing robot is an automated dispensing equipment placed on a workbench. It mainly consists of a motion system comprising three mutually perpendicular axes (X-axis, Y-axis, and Z-axis), which enables precise control of the position of the dispensing head within a three-dimensional space. The X-axis and Y-axis are primarily responsible for positioning within the plane, while the Z-axis controls the vertical distance between the dispensing head and the workpiece. By using pre-programmed instructions to control the movement of the three axes, the dispensing head can accurately move to the designated position on the surface of the workpiece, determining the height and depth of the dispensed material.

The global 3-axis Benchtop Dispensing Robots market size was estimated at USD 403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
