Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3-Finger Pneumatic Gripper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 3-finger pneumatic gripper is an end effector driven by compressed air. It uses a piston to drive three symmetrically distributed gripping fingers to open and close synchronously to achieve adaptive gripping of workpieces. Its core features are self-centering function and high adaptability. Compared with the two-finger gripper, the three-finger structure can form a more balanced wrapping force distribution on the surface of the object, which is suitable for scenes that require high concentricity and stable clamping. In 2024, the global production of 3-finger pneumatic grippers will be about 550,000 units. The price depends on its specifications. The average selling price of mid-to-high-end products is about US\$4,800 per unit, and the average selling price of low-end products is about US\$110 per unit.

The global 3-Finger Pneumatic Gripper market size was estimated at USD 254.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
