Abstracts

3-Methoxybutyl acetate is an ester-based solvent characterized by the combination of 3-methoxybutanol and acetic acid, resulting in a clear, colorless liquid with a mild, ester-like odor. It is valued for its favorable properties, including moderate evaporation rate, high solvency power for resins and polymers, low volatility, and good compatibility with a wide range of coating materials. As a slow-evaporating glycol ether acetate, it is primarily used in industrial and specialty coatings, inks, adhesives, and cleaning formulations, where it enhances flow, leveling, and gloss while reducing viscosity and minimizing health and environmental risks compared to more volatile or hazardous solvents. Its balanced performance makes it a functional ingredient in high-solids, waterborne, and energy-curable systems, aligning with regulatory trends toward safer and more sustainable chemical alternatives.

The global 3 Methoxybutyl Acetate market size was estimated at USD 150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
