Report Overview

3-Methoxypropylamine (MOPA) (CAS 5332-73-0) is a clear, colorless liquid. It typically has an ammonia-like odor. It has properties typical of primary amines and is miscible with water, ethanol, toluene, acetone, hexane and other standard solvents.

3-Methoxypropylamine (MOPA) is useful for preparing water-insensitive waxes. It volatilizes with water and leaves behind an insoluble wax film. Further,

3-Methoxypropylamine (MOPA) in dilute solutions does not have an objectionable odor. The material has been compared with morpholine in such applications and may, in fact, function as a substitute for morpholine in some instances. 3-Methoxypropylamine (MOPA) should also find use in insecticide emulsions, dye solvents, textile assistants, and in general, applications in which mild bases of moderate volatility are desired. It has been used in the production of dyes to modify polybutadiene-based isocyanates and in the manufacture of polyamide resins. The treatment of aluminum and aluminum alloy surfaces with dilute solutions of 3-Methoxypropylamine (MOPA) is reported to improve the adherence of various coatings which may be subsequently applied.
