Report Overview

When electrical power is distributed to its point of utilization, it is normally either in the form of single-phase or three-phase alternating current (AC) voltage. Single-phase AC voltage is distributed into residences and smaller commercial buildings. Normally, three-phase AC voltage is distributed to industries and larger commercial buildings. Thus, the main types of power distribution systems are residential (single-phase) and industrial or commercial (three-phase). A distribution board is a panel or enclosure that houses the fuses, circuit breakers, and ground leakage protection units used to distribute electrical power to numerous individual circuits or consumer points.
