Abstracts

A 3-piece fish can is a traditional and widely used packaging format in the seafood industry, known for its robustness and reliability. This type of can consists of three components: a cylindrical body made from a flat sheet of metal, and two end pieces, one serving as the bottom and the other as the lid. The body is formed by rolling the metal sheet into a cylinder and welding or soldering the side seam, while the end pieces are attached by double seaming after the fish is packed inside. This design ensures a strong, airtight seal, preserving the fish's freshness, flavor, and nutritional value for an extended period. The 3-piece construction allows for a variety of sizes and shapes, making it versatile for different types of fish products. These cans are durable and stackable, facilitating easy storage and transport. They often feature easy-open ends for consumer convenience. Additionally, 3-piece fish cans are made from recyclable materials like tin-coated steel or aluminum, contributing to environmental sustainability by promoting recycling and reducing waste.

The global 3 Piece Fish Can market size was estimated at USD 516.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
