Report Overview:

FOUP and FOSB are terms used in semiconductor manufacturing to refer to containers used for transporting and storing silicon wafers, particularly 300 mm wafers, which are the standard size used in modern semiconductor fabrication processes.

FOUP (Front Opening Unified Pod):

A FOUP is a specialized container designed to safely transport, store, and protect silicon wafers during various stages of the semiconductor manufacturing process. It has a front-opening mechanism that allows wafers to be loaded and unloaded robotically without exposing the wafers to the surrounding environment. FOUPs are used to maintain the cleanliness and integrity of wafers, protecting them from contamination, particles, and other factors that could negatively affect the quality of the manufactured chips.

FOUPs often have sophisticated features, such as interlocks, sensors, and RFID (Radio-Frequency Identification) tags, that help ensure the proper handling and tracking of wafers within the cleanroom environment. These containers are an integral part of automated material handling systems within semiconductor fabrication facilities.

FOSB (Front Opening Shipping Box):

Similar to FOUPs, FOSBs are also containers designed to transport and store silicon wafers. However, FOSBs are typically used for shipping wafers between different facilities or locations, such as from a wafer manufacturer to a semiconductor fabrication

plant. They are designed to provide extra protection during transportation to prevent damage to wafers.

FOSBs often have additional packaging materials inside, such as foam or other cushioning materials, to absorb shock and vibrations during transit. They may also include mechanisms to secure the wafers within the container to prevent movement that could lead to breakage.

Both FOUPs and FOSBs are critical components of the semiconductor supply chain, ensuring that wafers are handled, transported, and stored in a controlled and protected environment to maintain their quality and usability.

The Global 300 mm Wafer FOUP and FOSB Market Size was estimated at USD 750.43 million in 2023 and is projected to reach USD 1138.89 million by 2029, exhibiting a CAGR of 7.20% during the forecast period.
