Abstracts

3003 aluminum alloy sheet is a widely used non-heat-treatable aluminum-manganese alloy known for its excellent corrosion resistance, good formability, and moderate strength, making it a versatile material in applications where durability and workability are prioritized over high mechanical performance; it contains manganese as the primary alloying element (typically 1.0-1.5%) which enhances its strength compared to pure aluminum while retaining favorable characteristics such as weldability and suitability for anodizing, and it is commonly employed in industries such as construction (for roofing, gutters, and siding), transportation (for truck trailers and body panels), cookware (including pots and baking sheets), and heat exchangers due to its balance of properties and cost-effectiveness.
