Report Overview

3,5-Dimethylphenol (meta-xyleneol) is an organic compound belonging to the xyleneol family, characterized by two methyl groups attached to a phenol ring at the 3 and 5 positions. It is a white to light yellow crystalline solid with a phenolic odor, primarily used as an intermediate in the synthesis of antioxidants, pharmaceuticals, agrochemicals, and fragrances. Its chemical properties, including its ability to act as a precursor in the production of resins and plasticizers, make it valuable in industrial applications. The compound is also employed in the manufacture of disinfectants and as a stabilizer in polymer production.

Globally, the market for 3,5-dimethylphenol is driven by demand from the pharmaceutical and agrochemical industries, where it serves as a key building block for active ingredients. Growth in these sectors, particularly in emerging economies, is expected to sustain market expansion. However, regulatory scrutiny over chemical safety and environmental concerns regarding phenol derivatives may pose challenges. The Asia-Pacific region dominates production and consumption due to robust chemical manufacturing infrastructure, while North America and Europe remain significant markets due to advanced pharmaceutical R&D. Price volatility of raw materials, such as xylenes, also impacts market dynamics. Key players focus on optimizing production processes to enhance yield and cost efficiency while adhering to environmental standards.

The global 3,5-Dimethylphenol (meta-xyleneol) market size was estimated at USD 118.95 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
