Abstracts

3D Acoustics Modeling Services is a professional technical service system designed for enclosed/semi-enclosed spaces, complex engineering structures, or specific acoustic environments. It integrates 3D geometric modeling, acoustic physics simulation, measured data calibration, visualization analysis, and optimization solutions. At its core, based on acoustic theories (wave equations, statistical energy theory, etc.) and numerical calculation methods (finite element method, boundary element method, beam tracking method, etc.), it digitally constructs a 1:1 3D acoustic model that replicates the real-world scene. This model simulates the propagation, reflection, diffraction, and absorption of sound fields in space, quantifies key acoustic indicators such as sound pressure level distribution, reverberation time, and speech transmission index, intuitively presents acoustic effects, and provides customized optimization solutions. It addresses core needs such as acoustic performance prediction, noise control, sound quality improvement, and compliance verification, providing scientific data support and technical assurance for project design, engineering implementation, and quality upgrades in fields such as architecture, transportation, industry, and consumer electronics.

The global 3D Acoustics Modeling Services market size was estimated at USD 416.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
