Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 3D Candy competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 3D Candy production reached approximately 63.6 kilotons with an average global market price of around US\$8,400 per ton. Single-line annual production capacity averages 5,100 tons with a gross margin of approximately 32%. The upstream of the 3D-shaped candy industry primarily involves the production and supply of candy raw materials, such as sugar, gelatin, and colorants, which are mainly concentrated in the food ingredient sector. Downstream applications are divided into offline sales and online sales, with offline sales accounting for approximately 70% of consumption and online sales accounting for approximately 30%. 3D Candy refers to candies crafted with precise three-dimensional modeling and molding techniques, transformed into stereoscopic art pieces. These candies not only possess a unique visual impact but also strive for a sense of layering and personalization in taste and flavor. By combining the sweet taste of traditional candies with modern aesthetic principles, they aim to deliver a brand new experience that integrates visual and taste enjoyment for consumers. The advent of 3D candies not only enriches the diversity of the candy market but also enhances the collectible and emotional value of candies through their distinctive designs and manufacturing processes.

The global 3D Candy market size was estimated at USD 541.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
