Abstracts

3D cell culture hydrogel refers to a class of biocompatible, water-swollen polymer networks that provide a three-dimensional microenvironment to support the growth, proliferation, and differentiation of cells in vitro, mimicking the natural extracellular matrix found in living tissues more accurately than traditional two-dimensional cultures. These hydrogels are typically derived from natural sources?such as collagen, alginate, or hyaluronic acid?or synthetic and semi-synthetic polymers like polyethylene glycol (PEG), and they can be tailored with specific mechanical, chemical, and biological properties to support diverse cell types and research applications, including drug discovery, disease modeling, regenerative medicine, and personalized therapeutics.

The global 3D Cell Culture Hydrogel market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
