Abstracts

A 3D Cone Beam Computed Tomography (CBCT) system is a specialized medical imaging device that utilizes a cone-shaped X-ray beam to produce high-resolution, three-dimensional volumetric images of anatomical structures, primarily used in dental, maxillofacial, and orthopedic applications. Unlike conventional CT scanners, which use a fan-shaped beam and capture images slice-by-slice, CBCT systems rotate around the patient in a single 360-degree pass, capturing data in a volumetric format that enables detailed visualization of bone morphology, tooth orientation, nerve pathways, and soft tissue relationships with significantly lower radiation exposure and a more compact, cost-effective design suited for point-of-care settings such as dental clinics, imaging centers, and specialized medical practices.

The global 3D Cone Beam Ct System market size was estimated at USD 795.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
