## Abstracts

3D Doppler laser vibrometer is a high-precision vibration measurement device based on the laser Doppler effect. It can analyze the vibration state of the measured object in three-dimensional space. 3D Doppler laser vibrometer emits a laser beam to the surface of the measured object, and then collects and analyzes the scattered light signal generated by the vibration of the object. The vibration of the object will cause the reflected laser beam to undergo a Doppler frequency shift, which is proportional to the vibration speed of the object. By measuring and analyzing this frequency shift, the 3D Doppler laser vibrometer can accurately obtain the vibration information of the object. 3D Doppler laser vibrometers are widely used in various fields that require high-precision vibration measurement, such as mechanical engineering, materials science, biomedical engineering, etc. In the field of mechanical engineering, it can be used for vibration modal analysis, fault diagnosis and performance evaluation of mechanical structures; in the field of materials science, it can be used for testing and characterization of dynamic mechanical properties of materials; in the field of biomedical engineering, it can be used for vibration measurement of biological tissues and biomechanical research. With the rapid development of industrial technology, the demand for high-precision vibration measurement is increasing, which has promoted the growth of the 3D Doppler laser vibrometer market. 3D Doppler laser vibrometer has the characteristics of non-contact, high precision, and wide frequency response. It is widely used in R&D, scientific research, industrial manufacturing, automobiles, aerospace and other fields, especially in vibration modal analysis and structural dynamics research. In summary, the 3D Doppler laser vibrometer market has broad market prospects and development potential.

The global 3D Doppler Laser Vibrometer market size was estimated at USD 95.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00%

during the forecast period.
