Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Exoscope competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global exoscope production reached approximately 643 units, with an average global market price of around US\$ 155,000 per unit. An exoscope is a high-definition digital imaging system that enables surgeons to see a magnified image of the surgical field during microsurgeries such as procedures on the brain, eyes and spinal cord. Currently, the main players in the exoscope industry include ZEISS, Karl Storz, and Olympus, etc. Exoscope production is relatively low, with gross profit margins typically ranging from 50% to 60%. Market Drivers: By adopting 3D 4K technology, surgeons can see anatomical details with four times the resolution of standard HD imaging. Besides, surgeons can reliably identify tissue boundaries, blood vessels and lesions via a larger color range and light modes. It can help surgeons to reduce surgery difficulty and accidents. Moreover, exoscope untether surgeons from the constraints of traditional ocular-lens-based microscopes and experience a more ergonomic and more comfortable heads-up posture. Exoscope doesn't need to insert into the patient's body, which can reduce patient's uncomfortableness in some extent. Also, due to its easy operation, the surgery time can also be reduced, patients can also benefit from this. Exoscope can be widely used in some surgeries and with the increasing patients suffering from various diseases, the market potential is large. Market Restrictions: Compared with endoscope and operative microscope, the exoscope is relatively new products. The alternatives in the market will limit its development. Exoscope market is dominated by a few companies. The high cost of exoscope will bring pressure for its fast development. Exoscope is a kind of medical device. The certification policy in each country may threaten its marketing and

development.

The global Exoscope market size was estimated at USD 100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
