## Abstracts

3D factory simulation software is a three-dimensional computer program specifically designed to simulate and optimize various aspects of factory production processes, equipment layout, material flow, personnel scheduling, etc. This type of software creates a highly realistic virtual factory environment, allowing users to plan, analyze and optimize factory operations in detail without interfering with actual production. The 3D factory simulation software market is driven by factors such as the digital transformation of the manufacturing industry, the promotion of the Industry 4.0 strategy, and the growth of demand for intelligent manufacturing. By building a virtual factory model, the software helps companies make more efficient decisions in production line planning, resource allocation, process optimization, and risk assessment, significantly improving production efficiency and cost control capabilities. Especially in the fields of automobiles, electronics, logistics, and heavy industry, 3D factory simulation software has become a key tool for improving factory flexibility and responsiveness. In addition, the integration of cloud computing and artificial intelligence technologies also brings stronger real-time and intelligent capabilities to 3D factory simulation software. However, the market also faces some challenges, including high initial investment costs, complex software deployment processes, and high dependence on professional talents, which may limit the speed of adoption by small and medium-sized enterprises. At the same time, the lack of standardized interfaces between different software also hinders system integration and data sharing. Overall, despite certain barriers, the 3D factory simulation software market still has broad development prospects with technological advancement and popularization of applications.

The global 3D Factory Simulation Software market size was estimated at USD 347.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
